Education

- Jaypee Institute of Information Technology (JIIT), Noida | B.Tech (CSE) |** 2024 – 2028
- CGPA: 8.57 | Core Courses: Data Structures, Algorithms, DBMS, AI/ML
- Jaypee Public School, Noida | CBSE |** 2022 – 2024
- Class X (2022): 97.6% | Class XII (2024): 89.4%

Internships & Experience

- HDFC Bank | Project Trainee (Credit Analytics & Innovation - CRAIN)** May 2026 – Present | Noida, India
- Contributing to Generative AI and Retrieval-Augmented Generation (RAG) initiatives by developing scalable data ingestion and preprocessing pipelines for structured and unstructured enterprise documents.
 - Built Python-based automation workflows to extract, process, and chunk information from data, enabling efficient knowledge retrieval and downstream LLM applications.
 - Worked with Databricks and cloud-based data processing environments to support document parsing, metadata generation, and enterprise AI workflows.
 - Collaborated with cross-functional stakeholders to understand business requirements, standardize document structures, and improve automation processes for credit analytics use cases.

Projects

- VITIGEN — AI-Powered Vitiligo Companion** | Python, OpenCV, Scikit-learn, Llama 3, TinyDB Apr. 2026
- Built an OpenCV-based pipeline to quantify vitiligo progression from time-series images, enabling automated assessment using a computed Simplified VASI score
 - Built a correlation engine to identify relationships between lifestyle factors (stress, sleep, sun exposure) and disease progression, providing actionable insights
 - Integrated Llama 3 (8B) via Groq API as an AI health assistant; implemented secure multi-user authentication and per-user medical history storage
- Smart Electricity Analytics** | Python, Pandas, Scikit-learn, Streamlit, Machine Learning Feb. 2026
- Developed a forecasting system for household electricity consumption using Random Forest and Linear Regression, incorporating lag features and seasonal patterns to improve prediction accuracy
 - Built anomaly detection and an interactive dashboard to help users identify unusual usage and optimize energy consumption
- Pet Image Classifier — Udacity** | Python, PyTorch, NumPy, CNNs (VGG, ResNet) Jan. 2025
- Built a modular CNN-based image classification pipeline (VGG, ResNet) with preprocessing, batch inference, and evaluation automation

Skills

Programming Languages: Python, C++, Java
ML & Data: Pandas, NumPy, Scikit-learn, PyTorch, TensorFlow, OpenCV
Core CS: Data Structures, Algorithms, OOP, Relational Databases
Tools: Git, Linux, Databricks, Jupyter Notebook, MySQL, Streamlit, TinyDB
AI & APIs: LLM Integration, REST APIs, Computer Vision
Software Development: CLI Applications, File Handling, Debugging, Testing

Leadership & Activities

- AI/ML Hub, JIIT | Tech Team Member** June 2025 – Present
- Organized ML workshops and peer learning sessions for 100+ attendees
- Ffortissimo — Music Society, JIIT | Treasurer** July 2024 – Present
- Managed a budget of 25,000+ covering instruments, events, and society operations across semesters.
- Eloquence — Literary Society, JIIT | PR Lead & Anchor** July 2024 – Present
- Led PR team to promote society events; serve as anchor for major formal and informal college events.
